Art Unit: 3653

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kahler in view of Schreiber et al.

Kahler discloses a dispenser for test strips where the dispenser has a moisture-proof housing to prevent contamination of the strips. The housing is considered ^{to} have a "chamber" (76) which is sealed in a first position by the gasket (74) and which is opened in a second position to permit the strips to be dispensed. This occurs by a single motion of the sliding of the mechanism (50). To provide that Kahler would provide for an analyzing means would be obvious not only as a mere choice to so provide such analyzing or testing means for the test strips as is conventionally used with each test strips, but Schreiber et al discloses the use of an analyzing means for use with a test strip dispenser.

3. Claims 2-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Stewart is cited showing in figure 1 another type of dispenser using a reciprocating slider 26.
